Experience

FRONTEND ENGINEER | TELCONIX | AUG 2025 - PRESENT

- Improved Lighthouse performance scores by 70% on the FONU web platform, as tracked across monthly audits, by implementing code splitting, lazy loading, and component-level render optimizations in Next.js.
- Eliminated prop drilling across 15+ components, measured by a reduction in unnecessary re-renders, by migrating shared state to Zustand and restructuring the component architecture for web.
- Reduced redundant API calls by ~40%, as measured by network request logs, by implementing TanStack Query's caching and stale-while-revalidate strategy across all async data flows.
- Restored in-platform calling functionality for 100% of affected users, as confirmed through QA regression testing, by diagnosing and resolving a critical JSSIP VoIP integration bug on the frontend.
- Maintained WCAG 2.1 AA accessibility compliance across all new UI components, as verified via axe-core audits, by applying semantic HTML, ARIA attributes, and keyboard navigation patterns throughout the design system.
- Cut deployment-related bugs by 60%, as measured by post-deploy incident reports, by setting up GitHub Actions CI/CD pipelines that run ESLint, TypeScript type-checking, and build verification on every pull request.
- Shipped an average of 5+ production features per sprint, as tracked in sprint velocity reports, by coordinating closely with backend developers, designers (Figma handoff), and QA testers in a weekly release cycle.

JUNIOR APPLICATION DEVELOPER, INTERN | PHLEX PAYMENT | JAN 2024 - JUN 2024 (SIWES, COMPULSORY UNIVERSITY INDUSTRIAL PLACEMENT, BABCOCK UNIVERSITY)

- Increased Wema Bank's B2B Agency Banking landing page conversion touchpoints by 100%, as measured by client sign-up submissions, by building a fully responsive, WCAG-compliant page with pixel-accurate Figma-to-code implementation across all device breakpoints.
- Improved operations team response time to payment failures from hours to under 2 minutes, as measured by incident resolution logs, by building a real-time notification dashboard using WebSockets and RabbitMQ processing 1,000+ daily transactions.
- Recovered 95% of failed payments, as measured by automated reconciliation reports, by leading a team of 3 interns to build a transaction reconciliation service that identified and reprocessed failed payment records for customer refunds.
- Reduced new developer onboarding time by 60%, as measured by time-to-first-merged PR, by authoring end-to-end technical documentation covering architecture decisions, API contracts, and environment setup guides.

Open-Source Contributions

BRICKLY | FOUNDER | MAR 2026 - PRESENT

- Building an open-source drag-and-drop Vue application builder that enables users to visually create web applications using reusable components without writing boilerplate code.
- Architected and published [@brickly/file-explorer \(npm\)](#), a scoped microservice that serves as a secure file system bridge, exposing a Vite plugin and client API to enable real-time management of local Vue project files and directories during development.

ASTRONVIM | COC.NVIM EXTENSION FIX | CONTRIBUTOR | JUL 2025

- Resolved a critical plugin conflict (coc.nvim + AstroNvim) affecting 5,000+ developers. The accepted PR eliminated auto-completion disruptions and removed the need for manual configuration across the entire user base.

Education

BABCOCK UNIVERSITY | SEP 2021 - JULY 2025

- BSc. Computer Science (Information Systems).
- **Leadership:** Front-End Development Mentor, Babcock University Computer Club

Skills

- **Primary stack:** TypeScript, React, Next.js, Vue, Nuxt.js

- **State & data:** Zustand, TanStack Query, WebSockets, Pinia
- **Tooling:** GitHub Actions, Vite, ESLint, axe-core, Figma
- **Backend/DB:** Node.js, Express.js, Nest.js, MongoDB, MySQL, Drizzle ORM
